Instructions for Use of Domeboro
Patient Education

What to do if you have moist areas on your skin from radiation therapy:

1. Dissolve one tablet/packet of Domeboro in 2 cups of lukewarm water. Pour the solution onto a 4X4 gauze. Apply sopping wet gauze onto inflamed, open, and painful area.
2. Leave the Domeboro-soaked gauze on the area for 20 minutes. Do not allow the gauze to dry onto your skin (if gauze dries, remoisten with solution). Remove gauze and let area air dry.
3. Do this 3 to 4 times a day. Wear loose clothing and keep the area open to the air as much as possible.
4. Discard the solution every 24 hours and make a new solution.
5. Discontinue Domeboro soaks when the area has completely dried. You can then go back to using moisturizer in the area.

If you have any questions, please call (650)-723-5159 and ask to speak with a nurse.
